

The Economics of Private Equity

INTRODUCTORY COURSE

The Economics of Private Equity course is designed for the private markets professional looking to understand the economics of private equity asset class and its key relationships, investment processes and portfolio requirements.

This self-paced, online program combines self-guided learning with interactive videos and quizzes designed uniquely by the ILPA Institute executive education team.

Key Learning Objectives

- Learn about the fees involved in private equity, as well as the flow and order of profit distribution
- Understand general partner economics and how to watch out for areas of misalignment
- Understand portfolio selection and the considerations when developing an investment portfolio
- Define key quantitative performance indicators and how to use key performance metrics to interpret private equity fund performance
- Learn about benchmarks that measure the performance of private equity investments and how investors use them to evaluate fund performance
- Understand guidelines used to interact with managers and monitor fund performance

Who Should Attend?

This program is part of the ILPA Institute's Introductory series of courses, which means this program is designed for anyone new to private markets or interested in learning about the asset class.
